Equinor detected cyber-attack - update

17 November 2026 12:55 (GMT-5)

Last modified 18 November 2026 04:26

Update 18 November 2026, 09:47 CET: Equinor has gained a clearer understanding of how the attack was carried out and

which systems have been affected.

As this is not a virus attack, there is no risk of the attack spreading. At present, there is no indication that the attack has consequences for employees, partners or suppliers. Production remains unaffected.

Work is ongoing to neutralise the attack and restore the full integrity to the affected systems. It is too early to determine how long this will take. Equinor continues this work in dialogue with national security authorities.

Original news item, 17 November 2026, 18.55 CET:

Equinor has detected an ongoing cyber-attack against certain IT systems.

Relevant resources have been mobilised to neutralise the attack and regain full integrity.

There are no indications that data has been stolen. The attack has not affected Equinor's operations and production.

Relevant authorities are being informed.

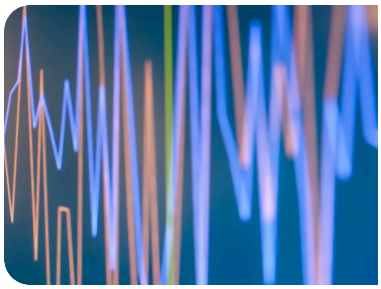

Equinor will provide updates when new information is available.
